

AET Phase 5A Turnpike Mainline/SR 91 All-Electronic Toll Conversion FM 429339-1, -2

March 2015

Description:

This project implements Phase 5A of the overall plan to convert the Turnpike System to All-Electronic Tolling (AET). Phase 5A is located on the Turnpike/SR 91 from I-595 at (MP 55) to south of the Lantana Mainline Toll Plaza (MP 88) in Broward and Palm Beach Counties. The improvements will maintain the existing tolling scheme which utilizes ramp and mainline tolling points along the Turnpike Mainline/SR 91. The work will include modifications at the Cypress Creek Mainline Toll Plaza and nine interchange ramp locations. This project also includes new landscaping and signage along the Turnpike/SR 91 and connecting roadways.

Benefits:

- Improves safety by eliminating physical barriers in travel lanes, stopping/slowing conditions, and decision points for drivers.
- Increases mobility by eliminating delay at the plazas.
- Improves traffic flow along ramps being modified.

Status:

Final design is expected to begin 2017 with construction scheduled to commence in 2018.

Investment:

The Turnpike has funded \$46 million for the construction phase of this project.
