

# SR 821 (HEFT) Express Lanes S.R. 836 to I-75 FM 435542-1/435543-1

**March 2015**

---

## **Description:**

These projects are a continuation of the widening SR 821 (HEFT) from 6 to 10 lanes with 2 Express Lanes from SR 836 to I-75. Local road turn lane improvements are planned along the project limits as part of the interchange improvements. This project will extend the express lanes network currently under construction south of SR 836 north and connect to the I-75 Express Lanes at the interchange with I-75. This project also includes an option to add new Direct connect express lanes to and from the north along SR 821 to SR 836.

The project will add thirteen (13) miles to the twenty-one (21) mile long network currently or soon to be under construction. New tolling points (toll gantries) will need to be constructed along this corridor to accommodate the additional capacity as well as the express lane network.

## **Benefits:**

- Provides long-term improvement to meet future traffic needs in Miami-Dade County.
- Completes the express lane network to the I-75 express lane network.

## **Status:**

These projects are currently programed with design funded for FY15 and construction in FY18.

## **Investment:**

The current construction cost estimated for these projects is approximately \$275 Million.
